## World Class Wall Protection Systems

Wall protection systems are used to protect surfaces from damage caused by the general flow of pedestrian or wheeled traffic.

Wall protection is a system of complementary products designed to protect or reduce damage to surfaces by resisting impact or abrasion. A combination of product types is often necessary to match the potential type and level of protection required while achieving the most cost effective solution.

### Wall Protection Systems

Benefits for your business

- Reduces repair & maintenance
- Protects walls, corners & doorframes from pedestrian & wheeled traffic
- Maintains the overall appearance of interior throughout it's life
